Electronic Tracking and Verification

VERiDeposit™

Specialists in financial and security technologies.

VERiDeposit™

VeriDeposit™ tracks and records commercial deposit drops. Electronically. Customers and banking institutions get accurate reports of all night deposit transactions. Instantly.

Prevent loss, block fraud, eliminate ghost deposits and prohibit tampering.

VeriDeposit confirms that a legitimate deposit has been made and then generates a digital record with the time and date. The customer receives a receipt on the spot. The opening teller prints out an easy-to-read deposit report.

VeriDeposit eliminates mailed confirmations and dual control checks.

The customer's unique VeriDeposit card identifies every drop. For emergencies, there's a panic button on the keypad. For added safety, connect the VeriDeposit system to existing security cameras.
